Frankenstein: Boon to Humanities Classes

- Should there be limits to human ambition?
- What are the defining qualities of humanity?
- How do we treat those who are different?
- Why do we need limits on scientific experimentation?

Why do we need limits on scientific experimentation?

- "Frankenstein in the Age of CRISPR-Cas9"
 - *Nautilus*, October 20, 2017
- "Why fast food chains sell Frankenfood"
 - *CNN Money*, June 28, 2018
- "Oops, I created a frankenfood monster: how we made Nutellasagna"
 - *The Guardian*, April 23, 2018

Stories Make the Abstract Concrete

- Stories provide data points
 - Biomedical Ethics needs to cover Drs. Frankenstein & Moreau
 - Theology needs to cover Drs. McCoy & McCoy
- Stories make unfamiliar ideas accessible
 - Works for science like chaos theory & machine learning
 - Works for grace and natural theology

Religion as a Stage of Development: *Star Trek*

- Religion is a cultural construct that loses force in multicultural contexts
- Religion is how we explain what we don't understand
- Religion is an expression of ignorance

From *Star Trek Into Darkness* © Paramount Pictures

The Natural and the Supernatural: *Star Wars*

- "All that surround us is the foundation of life, the birthplace of what your science calls midi-chlorians, the foundation of what connects the Living Force and the Cosmic Force." - Yoda, *Star Wars: The Clone Wars* "Destiny"
- "...there's this world of creatures that operate differently than we do. I call them the Whills. And the Whills are the ones who actually control the universe. They feed off the Force." - George Lucas, *James Cameron's Story of Science Fiction*

Rationality of Religion: *Incredible Hercules*

- "Mankind shall evolve past mindless, superstitious obedience to their gods."
- "So reason may flourish at last" - Athena, actual Greek god

Different Spaces, Different Identities: *Ms Marvel*

- Kamala Khan is a first-generation Pakistani-American teen
- Is she same person at home, at the mosque, and at school?
- Is she the same person on-line and in real life?
- Is she the same person when she's a superhero?

Frankenstein also introduces galvanism

"...a theory which he had formed on the subject of ***electricity and galvanism***, which was at once new and astonishing to me. All that he said ***threw greatly into the shade*** Cornelius Agrippa, Albertus Magnus, and Paracelsus"

How is Science Done: *Ant-Man*

THE SCHMIDT INSECT STING PAIN INDEX

The Schmidt Pain Index was developed by Dr. Justin Schmidt, an entomologist, as a method for comparing the pain of various different insect stings he experienced during his work. The scale runs from 1 to 4, with four being the most painful. Pain can be subjective, varying from person to person, and this scale is therefore not absolute.

Key Pain: 1 2 3 4 **Type:** BEE WASP HORNET ANT **SIZE** **APPROXIMATE DURATION**

Note: circles sizes relate to duration, but are for purposes of comparison only, and are not to scale. All durations are an average, and as with pain, are subject to variation.

Computer Science: *Squirrel Girl*

- ACID Database Properties
- C++
- Flow Control
- Thinking like a programmer

Chaos Theory Mathematics: *Jurassic Park*

Chaos Theory Mathematics: *Jurassic Park*

By Andy Walsh

Grace, Sovereignty & Chaotic Dynamics

- Sensitivity to initial conditions
 - Particulars matter
 - Freedom is real
- Attractors
 - There is a plan
 - The plan includes grace, can be accomplished multiple ways

By Andy Walsh

Machine Learning: *X-Men*

- Underfitting – model cannot represent the full solution
 - *Uncanny X-Men* vol 2 #1-3
 - Mr. Sinister uses an evolutionary algorithm to predict behavior
 - Fails when X-Men employ new members & tactics

Machine Learning: *X-Men*

- Overfitting – model fits the particulars of one dataset; can't generalize
 - *Wolverine & the X-Men* vol 1
 - Kid antagonists try to replicate past villains' plans, down to costumes
 - X-Men kids don't repeat the mistakes of their predecessors

Machine Learning & Natural Theology

- The Bible & Christian tradition define the shape of possible theologies
- Science provides data for which those theologies need to account
- A good understanding of both balances the problems of:
 - Standing for nothing & falling for everything
 - Being too heavenly minded & of no earthly good

May We Have a Word: *Arrival*

- Words are only useful if we share concepts
 - "War" vs "A desire for more cows"
 - "Weapon" vs "Tool"
- No one has a complete set of concepts
 - Heptapods understand time very differently
 - Maybe differently enough that it isn't even 'time'
- New words at the very least simplify communicating new concepts

Conclusions

- Stories are relevant to faith & science conversations
- Stories can illustrate scientific concepts
 - In the text
 - In the subtext
- Scientific concepts can bring new language to theology
